

# ABSTRACT

The invention is concerned with an additive for a non-aqueous electrolyte of an electric double layer capacitor having a high dissolving power of a support salt and a low viscosity and comprising  
5 a phosphazene derivative represented by the following formula (I):

(wherein  $\text{R}^1$  is independently a halogen element or a monovalent substituent; and X is an organic group containing at least one element selected from the group consisting of carbon, silicon, nitrogen, phosphorus, oxygen and sulfur) as well as a non-aqueous electrolyte  
10 electric double layer capacitor comprising an electrolyte containing this additive and having excellent high-rate characteristics.
